

Getting better

Patients learn to carry out activities of daily living, using robotics, kitchen, toilet and mock-up grocery store. I even learn to cross roads again with a real traffic light in the gym!

As an outpatient, I learn to balance so I can go out on my own without fear of falling. My children don't need to take leave to take me anywhere.

If I need help, I engage outpatient services and meet the doctors, nurses and therapists who look after me. I consider them my new friends!

Serving Loving Healing

Patient

conditions include

- Strokes
- Fractures
- Falls
- Amputation
- Joint replacement

Services include

- Physiotherapy
- Occupational therapy
- Speech therapy
- Geriatric care
- Wound care
- Dementia care

Car: Limited car park lots are available in the hospital. More car parks available at Blk 142, 160 and 161. Multi-storey car park at Blk 154A.

Rehabilitation helps patients regain their ability to walk, talk and carry out other activities of daily living after an accident, operation, stroke or illness. Here is a patient's story^.

From here to there

I chose to go to St Luke's Hospital (SLH) for rehabilitation. An ex-patient recommended SLH to me as SLH staff saw him "as more than a patient". Their work is "more than just a job", they are committed and don't give up.

SLH is "high tech" (with robotics) and "high touch". When patients feel down, therapists give them strength to carry on.

Four in five St Luke's Hospital patients significantly improve their ability to perform basic activities like eating and moving about independently.
